

IDL (Indirect Dyslexia Learning)

What is IDL?

IDL was established over 20 years ago and has helped many students improve their reading and writing skills.

It is a specialist literacy software programme for people with dyslexia or dyslexic type difficulties. Highly successful at raising reading and spelling levels, IDL has helped adults and children around the UK to improve their literacy skills.

The IDL software is a multisensory learning method – using sight, sound, touch & voice. It builds up skills gradually in a stress-free way. Reading and spelling feels easy and comfortable. New skills are practised and revised until learnt. There is a structured approach, which provides a learner-friendly, accessible course.

IDL users say they feel happier and more confident because they are improving their reading and spelling.

Studies have shown average improvement as 10 months in reading and 11 months in spelling after only 26 hours on the IDL programme.

The programme is web based and can be accessed from home using the following link or by searching for IDL Cloud and clicking log in.

<https://idlcloud.co.uk/schools/IDLWeb.html>

You will need to allow for the microphone to work. Pupils who use it each have a log in card with their own username and password.

There is also an Apple app which can be downloaded on to iPads', however there currently isn't an android version.

If you require further assistance from school please contact Ms C Jablonski, Key Stage 4 Leader.
